

Burnout in GPs and indicators of suboptimal patient care
IRAS ID: 268533 v1.0 19/07/2019

Practice agreement to participate in the study

'Investigating burnout in general practitioners and indicators of suboptimal patient care within the RCGP Research Surveillance Centre network'

The Royal College of General Practitioners (RCGP) Research and Surveillance Centre (RSC), in collaboration with the Division of Population Health, Health Services Research & Primary Care, at The University of Manchester is conducting a study in 70 general practices across England.

This study aims to examine whether higher scores of burnout in General Practitioners are associated with the characteristics of and the quality of patient care at general practices within the RCGP RSC network.

Approvals for the study from the The University of Manchester Proportionate Research Ethics Committee and HRA have been obtained. Further details about the study are outlined in the accompanying information sheet.

Purpose of the Agreement:

The purpose of this agreement is to secure commitment from your practice to participate in the study. If you agree to take part, you will be required to provide such support as may be reasonably required to achieve the study's aims.

Please sign on the following page if you consent to participate in the study. Please include full contact details for the practice, the practice's lead clinician, and the contact person for matters related to the study.

Thanks for your help and your interest in the study. Please do not hesitate to be in contact if you need more information.
